"MODERATELY STATIC" SILHOUETTE POPULAR

DODGE BROTHERS MOTOR CARS

Paris Offers Mode; New York Pays Careful Attention.

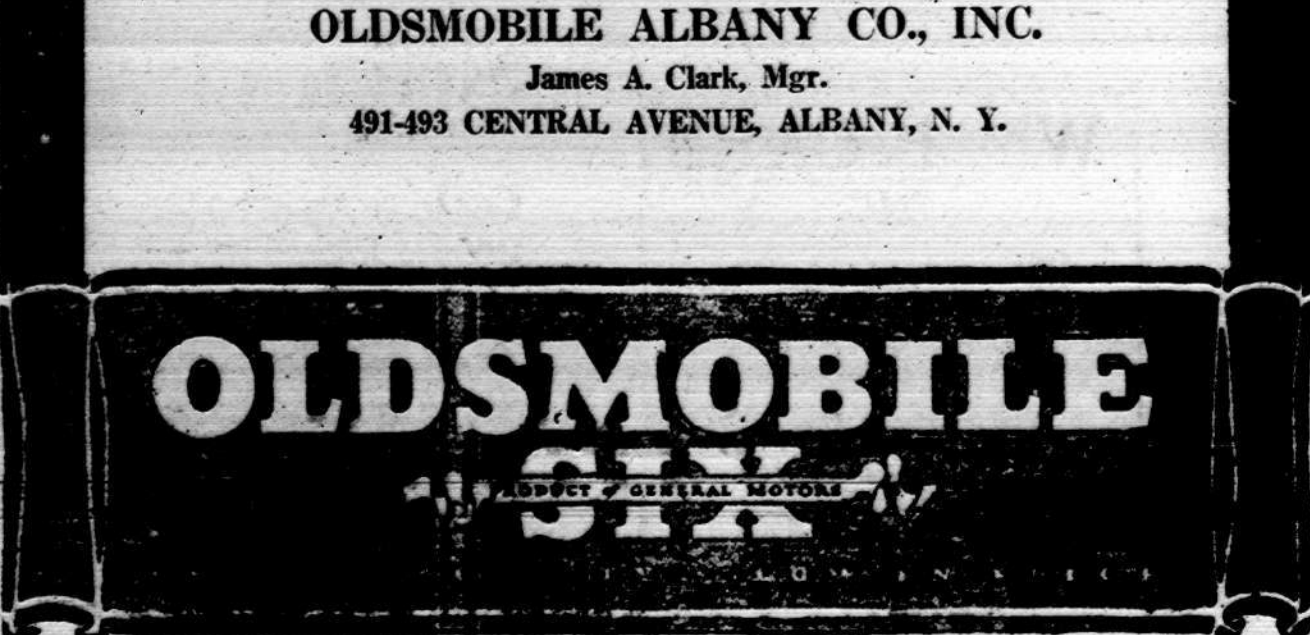

NEW YORK, April 24 (AP)—Fashionable Paris offers, and New York pays attention to, the "moderately static" silhouette as a change in the outlines of spring.

This independent understudy of the leading fash expresses its lines in box pleats, attached in from shoulder to hem, in unyielding straight line skirts of smart tailored suits, in cleverly scant cut coat dresses. If this "static" line does not supersede last season's smart and practical "kinetic" line on the avenues, it probably will have its vogue on downtown streets and in business offices.

It is a joy to drive a car so completely at your control. It is a delight to discover acceleration and braking, so positive and yet so smooth. It is a relief to encounter steering ease that does away with the usual trials of traffic and of parking. And in Oldsmobile's luxurious comfort you will find unending pleasure. The growing praise of Oldsmobile is not only for what it does—but how it does it.

Highest in Quality Lowest in Price

The finest steels available are used in the manufacture of Ford cars. The plate glass for windshields and windows is as perfect as can be made. Upholstery material contains a larger percentage of wool than is ordinarily specified—even for much higher priced cars. The basic features of Ford design have never been improved upon by any manufacturer.

No other car offers greater dependability. The Ford car has won the favor of millions of users, under every conceivable motoring condition. Its convenience is known and appreciated the world over; its performance is taken for granted.

Such quality is possible at Ford prices because every operation, from mining of ore to final assembly is under direct control of the Ford Motor Company.

Iron is taken from Ford mines in Michigan; coal from the Company's mines in Kentucky and West Virginia. Glass comes from Ford glass plants; wood from the Ford timber tracts in the North. Raw materials and finished products are carried over the Company's own transportation routes; coke ovens, blast furnaces, a steel mill, foundries and saw mills—all are part of this complete organization. There are even salvage plants, paper mill, cement plant, etc., to transform waste materials into useful by-products.

In this way every conceivable economy is effected. Under no other circumstances could Ford quality be had at Ford prices.

Features That Maintain Ford Leadership

Simple, Dependable Lubrication.
 The Ford lubricating system is simple and efficient. Practically all of the parts of the engine and transmission are oiled from one oil reservoir in the crankcase. No pump is required.

Three Point Motor Suspension.
 First used by Henry Ford in 1908 and a feature of the Model T power plant for thirteen years.

Thermo-Syphon Cooling.
 Circulation of water is entirely governed by engine temperature. There is no water pump requiring frequent need for packing.

All-Steel Bodies.
 Built entirely of steel to provide maximum safety and service, the bodies of Ford cars are carefully manufactured as the Ford engine and chassis.

Planetary Transmission.
 The Ford planetary transmission is the ideal speed control for a light car. Costs more to build than the conventional sliding gear type, but is used because of its superiority.

Torque Tube Drive.
 Henry Ford originated the Torque Tube in 1903. By use of this construction the rear spring does not take any of the driving thrust and is free to act solely as a flexible support for the car body.

Multiple Disc-in-Oil Clutch.
 Generally conceded to be the best, the smoothest and the most reliable for any car. The Ford clutch
