A BIBLE THOUGHT FOR TODAY

Sometimes we mistake God's loving kindness for misfortune, but wait and see. Who crowneth thee with loving kindness and tender mercies, who satisfieth thy desire with good things.—Psalm 103:5.

YANKS IN BRITAIN

A British humorist, running into American soldiers in every restaurant, music hall, pub, train and bus, recently remarked: "There's only four things the matter with these Yanks: They're over-ranked, overpaid, over-girl-conscious, and over here."

Of course he was joking. But, as Leland Stowe said on the radio the other night, think of what might happen in Indiana and Illinois if two million British soldiers were suddenly poured into that area and there were 45 million Americans there instead of 11 million.

That's practically the situation Britain faces with all those Yanks over there in totally new surroundings. The enforced mixing of two peoples even though they are supposed to speak the same language, is always difficult.

BRIDGE REPORT

The annual report of the New York State Bridge authority, gives further encouraging news about the operation of the three bridges under the authority's control—the Mid-Hudson bridge, here; the Rip Van Winkle bridge, at Catskill; and the Bear Mountain bridge.

Despite wartime restrictions on travel, the three bridges showed a net profit for the fiscal year, ending March 31, of \$316,675. The authority reported that all three spans made an exceptionally good record by comparison with other vehicular bridges in the eastern seaboard.

Chairman Robert Hoe of the authority board was so well satisfied with the showing of the three bridges that he predicted another substantial payment of the authority's bonds would be made this year. A total of \$600,000 on the bonds of the Bear Mountain span was paid off in the last two years, \$300,000 in each year.

SENATORS HAMMERED 17 TO 9; DROP BACK INTO SECOND PLACE

BINGHAMTON, June 1 (AP)—In a loosely played game in which each team committed four errors, and a quintet of Albany pitchers couldn't find the plate, the Binghamton Triplets beat out a 17 to 9 victory over the Senators here last night.

The defeat toppled the Senators off their first place perch which they grabbed in a doubleheader victory at home Tuesday, and left them a half game back of Hartford, winner over Utica, 7 to 5.

GIRLS' HI-Y CLUB PLANS ROSE BANQUET

The Girls' Hi-Y Club will hold its annual rose banquet Friday evening, June 16, at the General Worth Hotel. The rose banquet has been a tradition of the club for many years.

THE SPECIAL SENSES

Man is primarily a creature of sensation and these sensations come to him through special sense organs which refer stimuli to the appropriate brain centers. We are all familiar with the five senses; the senses of sight, hearing, touch, taste and smell; however, man possesses other special senses such as the temperature sense, muscle sense and so on.

In simplest forms of life, no special sense organs were developed. The amoeba needed no special organ of sight because the whole body was all eye. However, with more complicated development, we find that life in certain forms depends upon specialization of cells and certain cells specialize, taking over the work of seeing, becoming the organ of sight.

A sense organ is so constructed that it will respond to its own particular stimulus—thus, the eye responds to light and the ear to sound and so on. Each sense organ is made up of three parts. First is the outer organ itself which responds to the stimulus, next this stimulus is carried inward over a nerve path which conducts it to the third part, which is a special center in the brain where those particular messages are handled.

It is interesting to note that the sense organs receive stimuli only because, like all other cells in the body, they are capable of being irritated. Irritability is the primal attribute of a cell. The kind of irritability depends upon the kind of sense organ—thus the eye is irritable to light, the ear to sound and so on. The nerves of the special sense organs are so highly specialized that they respond to any irritation by their own particular, inherent kind of sensation.

In a future article, I will discuss some of the other special senses which do such interesting work for you.

QUESTIONS AND ANSWERS

QUESTION: Miss Virginia E. writes: "Please give me some information about pumpkin."
ANSWER: To consider the pumpkin a wholesome non-starchy vegetable is cooked properly. It is best cooked in the same manner as squash, that is, cut into small pieces, boiled in plain water and mashed if desired, while cream and butter may also be added.

SEA SCOUTS ENJOYED CAMPOREE NEAR BRIDGE

Monday night Sea Scout Ship 109, sponsored by the Brotherhood, St. John's Lutheran church, joined with Sea Scout Ship 153, of Castleton, in a camporee held at their camp at the Rip Van Winkle Bridge, on the west side of the river.

Rev. A. Stacey returned from the Conference Friday evening.

Keeps Water Cooler One of the many utilitarian uses of white paint on farm property is to reflect heat from water and gasoline storage tanks—to keep the water cooler for consumption by livestock or for domestic use and to reduce evaporation of the gasoline.

Used in Paints The ore rutile is the source of titanium, used in the manufacture of paints and as an alloying agent in steel and other metals.

Peat Resources Recent government reports show that the United States has sufficient peat reserves to supply each family with about 450 tons. Peat could be used for home heating in case of a serious coal famine.
